General Index to the Annual Proceedings of the Canadian Gold Metallurgists and of the Canadian Mineral Processors 1964 to 1985

PREFACE

The Canadian Mineral Processors, formerly the Canadian Gold Metallurgists, has published papers on the milling and processing of ores mined in Canada, namely, gold, silver, base metals, uranium and potash, and tar sands. They offer the mineral industry of Canada a most useful reference for updating existing flowsheets, eliminating in-plant losses, or lowering recovery costs.

This report was prepared so easy identification of papers in the volumes could be possible when specific interests arise. For this purpose, it is divided into the following sections; Subject Index, and Author Index, where all listings are arranged alphabetically and in chronological order. The first section presents titles to papers by topic, the second section gives names of the authors.

Copies of past proceedings can be obtained by writing to:

PREFACE

Les minéralurgistes du Canada, jadis connue sous le nom "Canadian Gold Metallurgists" a publié des documents sur le broyage et le traitement des minerais exploités au Canada, notamment l'or, l'argent, les métaux communs, l'uranium, la potasse et les sables bitumineux. Ces documents constituent une source de référence précieuse pour la mise à jour des schémas de fonctionnement existants, l'élimination des pertes dans l'usine ou la réduction des coûts de récupération.

Le rapport a été préparé dans le but de faciliter l'identification des documents que contiennent les volumes lorsque des questions d'intérêt particulier se posent. A cette fin, le rapport a été divisé de la façon suivante; liste d'ouvrages par sujet et liste d'ouvrages par auteur; les ouvrages sont présentés par ordre alphabétique et chronologique. La première partie comprend les titres des documents par sujet et la seconde partie comprend un répertoire des auteurs.
